

## **EOD037 AD17 HIGH SENSITIVITY HAND HELD METAL DETECTOR**

When the AD17 went into service it raised the standards of fully automatic, high-sensitivity hand held metal detection to a new level. The system features a two-position rocker switch. In the back position the rocker switch enables the AD17 to perform as a very effective, general-purpose metal detector with a very high operational speed. However, with the rocker switch in the forward position the AD17 converts to a super high sensitivity unit capable of detecting very small masses of metal that had previously been undetectable, but with the ease of a fully automatic unit, with just the flick of a switch.

|              |   |
|--------------|---|
| Length:      | 360mm   |
| Width:       | 105mm   |
| Body:        | 55mm  |
| Height:      | 35mm  |
| Weight:      | 280g including battery                            |
| Sensitivity: | High factory internally pre-set Turbo sensitivity |
