

**TCM012 HAND-HELD COVERT CAMERA DETECTION DEVICE**

The Hand-Held Covert Camera Detection Device is designed for the detection of covert surveillance cameras down to a lens size of approximately 1mm. The detector is designed to detect cameras hidden in clothing, such as button hole or tie camera as well as cameras hidden in walls, ceilings or briefcases up to a range of 10m regardless of whether they are on or not. The camera works in both light and darkness.

The detector incorporates high definition optics, a laser illuminator and focusing option, supported by a battery level indicator. The system is a discreet solution to an ever increasing threat.

**Specifications:**

Field of view:	10°
Resolution:	8"
Magnification:	3.5
Focus range:	From 1m to infinity
Emitter wave length:	635 nm
Emitter power:	5mW
Laser Eye Safety Class:	(CFR, J) 1
Range of micro video camera detection:	With lens of 1 mm and ambient light level up to 5,000 lx 1-10m
Battery type:	CR123A
Power Consumption:	3V
Operating time from one battery:	Up to hrs 20
