

EOD006 TELESCOPIC INSPECTION MIRROR

Never has the need for vigilance been greater, be it on the look out for people, explosives or contraband. As such DSE International's range of search mirrors are designed to be comfortable, robust and offer a high level of illumination to help pinpoint any suspicious objects.

The **Telescopic Inspection Mirror** provides a straightforward yet highly effective method of searching inaccessible areas. The lightweight, five-section arm has a unique injection-molded bearing and locking mechanism which holds the arm in the extended position during use. Manufactured from extruded aluminum with grey anodized finish, the ergonomic profile prevents unwanted arm section rotation and maximizes stability in use. The non-slip rubberised handle provides improved grip and comfort for users. The arm retracts fully into the handle section for ease of carrying and storage.

The system can be supplied with a standard torch or a LED lighting system. Please specify when ordering.

Mirror: 140 mm diameter mirror supplied as standard. Other mirrors available.

Extended length: 1500mm
