HOLD BAGGAGE CONTAINMENT SYSTEM

The Hold Baggage Containment System can be trailer mounted and therefore used right at the baggage screening point for immediate containment of an explosive threat from suspect hold baggage. This means that one can remove the threat to a safe area rather than having to evacuate the building. The system is currently in service worldwide and has proved to be popular as it allows facilities to stay open.

- Avoids costly evacuations or disruption of business operations
- Superior blast and fragment containment, many times the anticipated threat level
- Reduces risk of loss of life and property damage
- Optimally sized to fit right where the problem occurs, at security screening
- With unique full face opening and accommodating even over-sized baggage
- Easy to operate and highly mobile for swift removal of suspect item from terminals
- Very low maintenance costs and 12 months warranty

Specifications:

The Unit:	Weight:	1750Kg/3858lbs
	External dimensions:	1.7m x 1.7m x 1.7m 5.6ft x 5.6ft x 5.6ft
	Internal dimensions:	1.5m x 1.5m x 1.5m 5ft x 5ft x 5ft
The Unit & Trailer:	Weight:	2100Kg/4630lbs
	Width:	1.7m/5.6ft
	Height:	2.3m/7.6ft
	Stored Length:	2.4m/7.8ft
	Extended Length:	3.3m/10.8ft

The unit has been independently tested. Its capability is many times the anticipated threat level and is designed to work even when the explosive device detonates near the sides or the bottom of the unit, unlike alternative solutions. Available in various colours with optional logo
