

EOD033 BOMB SUPPRESSION BLANKET AND SAFETY CIRCLE

The **Bomb Suppression Blanket and Safety Circle** is a cost-effective means of suppressing the blast and fragmentation of an Improvised Explosive Device (IED) should it detonate.

Once a suspect device is identified the collar is placed around the device and the blanket draped over the top of the collar using the strong webbing carrying handles. Two or more blankets can be used to further reduce the effects of the device in case of detonation. The system is in service with countless military, government and corporate organizations around the world and can be used by both trained and untrained staff.

Standard configuration:

Colour:Black

Size: 1.5 x 2m

Protection: V50 of 450 m/s

The **Bomb Suppression Blanket and Safety Circle** is also available in the following sizes offering the following levels of protection and sizes.

V50 of 300 m/s (984 ft/s)

V50 of 450 m/s (1312 ft/s)

V50 of 500 m/s (1640 ft/s)

V50 of 600 m/s (1968 ft/s)

1m x 1m

1.5m x 1.5m

2m x 1.5m

2m x 2m
