## SUSPECT MAIL CONTAINER

**Suspect Mail – whether or not it turns out to be a real device – can cause great disruption to an organisation and its business continuity.**

The **Suspect Mail Container** is designed to live along side mail scanning equipment for the rapid, safe isolation of any item that is of concern. Evacuation procedures can then be carried out in a safe manner. Use of the Suspect Mail Container may also reduce the extent of evacuation required within a facility.

Should a device detonate inside the **Suspect Mail Container**, it will minimise damage to the surrounding room and contain the forensic evidence from the device – both factors minimising the downtime and disruption to the organisation.
