

PPE029 FUEL SAFE JERRYCAN HOLDER

Long distance operations in the field often require additional supplies of fuel. The jerrycan is the age old tool for this job, but if such operations are in a hazardous environment the transportation of unprotected fuel on vehicle roof racks is an unnecessary risk. Tested against hand grenades, the armoured jerrycan holder protects both petrol and diesel from close range explosive devices.

The holder also provides additional protection against theft and damage.

Features:

- Fibre reinforced composite construction
- Can be securely mounted on a roof rack
- Sturdy padlock hasp and robust hidden hinges
- Colour specified by customer

Tested against the British L2A2 Grenade – 170g of high explosive with fragmentation.

Weight: 15kg
