MICRO VIDEO SURVEILLANCE RECORDER 600

The Micro Video Surveillance Recorder is a pocket-sized surveillance recorder that captures up to 15 hours of single channel video and audio. Recordings are downloaded from the removable compact Flash card in AVI format for compatibility with many media players.

For use in different operating environments, up to eight profiles are available and can be selected using buttons on the recorder. These recording parameter profiles provide control of frame rate; compression; resolution; audio; colour; plus linear or loop recording. Each recording is time and date stamped, verification software checks downloaded recordings to ensure they have not been accessed or edited following their creation. Smaller than many MP3 players, the **Micro Video Surveillance Recorder** is easy to operate and the use of a removable Compact Flash memory card provides convenient data retrieval.

The recorder is available with either DC operation or an internal re-chargeable battery and uses a standard PC USB port as a power source. The system can also be supplied with a power converter which provides a 12V DC output to power a camera.

Miniature size and weight, plus the ability to record both audio and video using a rechargeable battery source, make the Micro Video Surveillance Recorder an ideal choice for body worn and other covert applications.

The system is supplied as standard with an internal rechargeable battery, push-button remote control, external microphone, protective case and 2GN Compact Flash Card. A DC (Micro Video Surveillance Recorder 600) version is also available.

Features:

- Single channel video and audio recording to Compact Flash card
- Up to 15 hours recording time
- Up to 25 frames per second
- Recordings saved to PC disk as AVI files for compatibility with standard media players
- Up to 8 configuration profiles
- Linear and Loop recording capability
- Time and date stamping
- Selectable video frame rates: 25, 12, 6, 3 and 1
- Optional Power Converter to power a camera
- Integral microphone
- Recording integrity verification
- External microphone and remote control option
- Re-chargeable and DC powered versions
- Simultaneous recording and charging
- Suitable for body-worn and other covert applications
- Windows software controls recorder configuration

Specifications:

Dimensions:	53 x 65 x 15mm x 10mm
Weight:	35g
Battery capacity:	1750 mAh
	6 Hours continuous recording time
	1 year stand by time
